STAR LIFE TECHNOLOGIES
Bringing Expectations To Reality

OFFICIAL PROFESSIONAL BIOGRAPHY

Epie El Sheriff

Founder and Chief Executive Officer
Starlife Technologies

Educator. Technology founder. Product builder. Digital-skills trainer.

EXECUTIVE OVERVIEW

A career built where education, technology, and responsibility meet.

Epie El Sheriff is a Cameroonian educator, technology founder, web developer, and digital-skills trainer. He is the Founder and Chief Executive Officer of Starlife Technologies, where he leads product direction, software and website development, digital infrastructure, deployment, and client support.

His professional identity developed across formal teacher education, English-language instruction, digital-content production, WordPress management, practical web development, technology training, hosting administration, and direct client support. Teaching developed patience and communication. Content operations developed consistency and audience awareness. Web development introduced systems thinking. Hosting and support created respect for reliability, security, recovery, and the consequences of production failure.

Rather than separating education from technology, Epie treats both as disciplines of problem-solving. In the classroom, success depends on understanding people and presenting ideas clearly. In software, success depends on understanding a workflow, translating it into a useful system, and supporting the people who depend on it.

PUBLIC NAME	Epie El Sheriff
FULL NAME	Epie El Sheriff Njomie
ROLE	Founder and Chief Executive Officer
COMPANY	Starlife Technologies
NATIONALITY	Cameroonian
HERITAGE	Oroko; family roots in the Mbonge area of Meme Division
EDUCATION	Bachelor of Education, University of Buea
WORKING REACH	Cameroon and Thailand
LANGUAGES	English and French

FAMILY, FAITH AND HERITAGE

Raised through education, care, Christian service, and Oroko identity.

Epie, whose full name is Epie El Sheriff Njomie, is the youngest of five children and was raised in a Christian, monogamous household. His parents' working lives placed education and care at the center of the family.

His father, Epie Felix Elangwe, worked as a teacher. The profession brought the discipline of learning, communication, and guidance into the home. His mother, the late Etongwe Veronica Enene, worked as a nurse, a profession grounded in patience, service, and concern for the well-being of others.

His mother died on 14 June 2014, but her spiritual and personal influence remains central to his story. She was deeply committed to God and raised her children in a God-fearing home. The family worshipped and served in the Seventh-day Adventist Church, where faith was expressed through participation, responsibility, and service.

The family also experienced the loss of one of Epie's sisters in 2020. The identities and personal lives of his living siblings remain private. These experiences of family connection, faith, loss, and perseverance contributed to the values he carries into education, leadership, client care, and long-term responsibility.

Epie identifies with the Oroko people and traces his family heritage to the Mbonge area of Meme Division in Cameroon's South-West Region, near Kumba. Academic linguistic research describes Mbonge as a dialect within Oroko, a Bantu language of Cameroon. This heritage forms part of the Cameroonian foundation from which his international journey developed.

EARLY LIFE AND EDUCATION

Curiosity about technology developed alongside a commitment to learning.

Epie's interest in technology began at approximately eight years old. What started as childhood curiosity gradually developed into a desire to understand computers, websites, software systems, hosting, and the ways digital tools can solve practical problems.

He completed his Ordinary Level studies at Government Bilingual High School, Massaka, in 2018 and his Advanced Level studies at Government High School, Matoh, in 2020.

In 2023, he earned a Bachelor of Education in Curriculum Studies and Teaching from the University of Buea. His studies included curriculum development, pedagogy, educational technology, psychology of learning, teaching practice, educational measurement and evaluation, research methods, guidance and counselling, educational administration, English phonology and stylistics, and literature.

He also completed professional web-development training, strengthening practical capability across front-end work, back-end concepts, APIs, databases, deployment, and maintenance.

Professional formation

2018	Ordinary Level - Government Bilingual High School, Massaka
2020	Advanced Level - Government High School, Matoh
2023	Bachelor of Education - University of Buea
2023	Professional web-development training

PROFESSIONAL JOURNEY

Experience accumulated through content, training, teaching, and production technology.

Epie's career developed through overlapping responsibilities rather than a single narrow job title. His work has included digital content and WordPress management, technology facilitation, digital-skills training, software and website development, hosting administration, deployment, and English teaching.

Since founding Starlife Technologies in 2021, he has remained closely involved in product direction, engineering decisions, client communication, infrastructure, production verification, and support. His teaching work in Cameroon and Thailand has added an international and cross-cultural dimension to his professional perspective.

Content and publishing

Digital content, WordPress operations, website administration, updates, and audience communication.

Technology training

Practical digital instruction delivered through patient, accessible communication.

Starlife Technologies

Product direction, software and web delivery, hosting, deployment, client support, and digital training.

English teaching

Classroom experience across Cameroon and Thailand, connecting education, language, and cross-cultural communication.

FOUNDING STARLIFE TECHNOLOGIES

Turning practical technical work into an accountable company.

In 2021, Epie founded Starlife Technologies after building experience across websites, content management, digital training, hosting, and technical support. The company was created around a straightforward promise: Bringing Expectations To Reality.

Starlife began with practical digital services including website delivery, WordPress management, domains, hosting, business email, SSL, cPanel operations, maintenance, and client support. That foundation exposed Epie to the full life cycle of a digital system: design, infrastructure, data, communication, reliability, recovery, and handover.

The company is developing across four connected roles: a software product company, an engineering studio, a digital-infrastructure partner, and a technical-support operation. Its work is connected to Buea, Cameroon and a contact presence in Sisaket District, Thailand.

PRODUCT BUILDING

WhaChat represents Starlife's long-term software chapter.

WhaChat grew from the need for a more complete relationship between a business and the people visiting its website. Under Epie's product direction, it developed beyond a simple chat bubble into a customer-support platform with business workspaces, owner and agent roles, live messaging, routing, visitor intelligence, status stories, tickets, notifications, analytics, email workflows, widget customization, and installation controls.

LEADERSHIP PHILOSOPHY

Clarity before complexity. Responsibility after launch.

Epie's leadership is influenced by the values that shaped his upbringing: faith, education, care, discipline, service, and responsibility. His father's work as a teacher reinforced the importance of knowledge and guidance. His mother's nursing career demonstrated compassion and service. His Christian upbringing emphasized integrity, humility, accountability, and respect for others.

These values influence how he approaches technology. A system should not only appear impressive; it should solve a real problem, protect the people who depend on it, remain understandable after delivery, and be supported responsibly.

COMMUNICATE CLEARLY	Explain the problem, scope, tradeoffs, and next action in language people can use.
EARN TRUST	Build confidence through verified work, transparent boundaries, and continued accountability.
THINK BEYOND THE SCREEN	Include users, data, infrastructure, permissions, deployment, recovery, and support.
DESIGN FOR REAL PEOPLE	Respect different devices, cultures, languages, abilities, and working conditions.

"Bringing Expectations To Reality is a commitment to listen carefully, build responsibly, and remain present when the work becomes real."

Epie El Sheriff, Founder and CEO of Starlife Technologies

PROFESSIONAL PROFILE

Capabilities shaped by technical and human work.

Epie's working profile combines technology implementation with education, communication, and client operations. He is professionally active across Cameroon and Thailand and continues to develop experience in cross-cultural education and digital business.

Software product direction	Web development	WordPress management
Hosting and deployment	Customer-support systems	Educational technology
English teaching	Digital-skills training	Business communication
Domains and SSL	Digital content	AI-assisted workflows

OFFICIAL CONTACT

Connect through Starlife Technologies.

Professional enquiries concerning software products, projects, partnerships, education initiatives, interviews, speaking opportunities, or technology collaboration should be directed through Starlife Technologies.
